Index

Volume 33 Nos 1–10
January/February–December 1991

SUBJECT INDEX

abstract data types 265, 281
actor-based systems 403
Ada 265, 292
Adapting and using JSD modelling technique as front-end to object-oriented systems development 465
algorithms 113, 273, 483
analogy 780
analysis 93
Analysis of hybrid voting algorithm for replicated file systems 273
analysis tools 340
animation 425
application architecture 191
application generators 31
Application of object-oriented databases to geographic information systems 38
Approaches to measuring size of application products with CASE tools 622
artificial intelligence 357, 499
Assembler 675
Assessment of two-level codeword indexing applied to Prolog database 157
attribute partitioning 335
automated application maintenance 343
Automated support of software maintenance 74
automated teller machines 200
Automatic graphics display management for abstract data types in Papillon prototype 265
automation 629

BAL/SRW: Assembler re-engineering workbench 675
behaviour modelling 425

BOOKS AND PUBLICATIONS
Abramson, H and Dahl, V Logic grammars 383
ACM Architectural support for programming languages and operating systems 164
Alexander, H and Jones, V Software design and prototyping using me too 166
Bagchi, T P and Chaudhri, V K Interactive relational database design 384
Becker, M, Haberfellner, R and Liebetrau, G Electronic data processing in practice: a handbook for users 167
Beer, J Concepts, design and performance analysis of a parallel Prolog machine 607
Bickerstaff, T J and Perlis, A J (eds) Software reusability. Volume I: concepts and models. Volume II: applications and experience 246
Bouldin, B M Agents of change: managing the introduction of automated tools 245
Buckley, F J Implementing software engineering practices 247
CBI Information technology: the catalyst for change 606
Corder, C Taming your company computer 303
Crespo, A and de la Puente, J A (eds) Real Time Programming 1988 383
Daly, D Expert systems introduced 462
Fairley, R and Freeman, P (eds) Issues in software engineering education 245
Finkelstein, C An introduction to information engineering: from strategic planning to information systems 244
Foster, I and Taylor, S Strand: new concepts in parallel programming 463
Gane, C Computer-aided software engineering: the methodologies, the products, and the future 246
Grabowski, J, Lescanne, P and Wechler, W Algebraic and logic programming 463
Grover, D (ed) The protection of computer software — its technology and application 384
Hall, P J How to solve it in Lisp 464
Harmon, P and Sawyer, B Creating expert systems 607
Hatley, D J and Pirbhai, I A Strategies for the real-time system specification 302
Hellerstein, Klein and Milliken Expert systems in data processing 605
Hoare, C A R and Jones, C B Essays in computing science 168
Horowitz, E and Sahni, S Fundamentals of data structures in Turbo Pascal for the IBM PC 464
Idrees, M Design and management of distributed data processing: a practitioner's approach 607
Kemp, D A Computer-based knowledge retrieval 166
Kerschberg, L (ed) Expert database systems 301
Kruse, R L Programming with data structures 164
Law, D Methods for comparing methods 301
Lester, K A practical approach to data structures 606
Long, J and Whitefield, A Cognitive ergonomics and human-computer interaction 302
Longworth, G Getting the system you want: a user's guide to SSADM 167
Martin, J with Chapman, K K DB2: concepts, design, and programming 462
Mayrhauser, A von Software engineering, methods and management 605
McDermid, J (ed) The theory and practice of refinement 164
Milner, R Communication and concurrency 462
Mullender, S Distributed systems 303
Mumford, E and Macdonald, W B XSEL's progress: the continuing journey of an expert system 168
Narayanan, A On being a machine. Volume 2: philosophy of artificial intelligence 604
Parrington, N and Roper, M Understanding software testing 303
Remenyi, D S J Strategic information systems: development, implementation, case studies 244
Rivlin, C, Lewis, R and Davies Cooper, R (eds) Guidelines for screen design 604
Schindler, M Computer-aided software design 246
Smith, B and Kelleher, G Reason maintenance systems and their applications 165
Treleaven, P (ed) Parallel computers: object-oriented, functional, logic 606
Trimble Jr, J H and Chappell, D A visual introduction to SQL 165

Building tailor-made software cost model: Intermediate TUCOMO 232

C++ 306
Capturing design-related decisions in JSD methodology 509
CASAS: engineering software applications 443
CASE 386, 547, 616, 622, 629, 637, 641, 647, 664, 684, 698, 720
CASE application products 622
CASE Data Interchange Format standards 647
CASE implementation 637
CASE implementation: accounting for the human element 637
case study 200, 292, 366
Case study of electronic banking at Meridian Bancorp 200
Case study of using different evaluation techniques in small company 366
CASE tool for reusable software component storage and retrieval in rapid prototyping 698
CASE tools 547, 611, 616, 698
class 250
COCOMO 232
codeword indexing 157
Combined optimal tuple ordering and attribute partitioning in storage schema design 335
Comments on paper by Christodoulakis and Panziou 103
communication 171
communication model 483
communication protocols 575
Comparing software development methods: example 386
Computer-aided prototyping: transformational approach 685
computer-aided software engineering 547, 611, 616, 622, 629, 637, 641, 647, 664, 684, 698, 720
computer-aided software maintenance tools 65
computer-supported cooperative work 259
conceptual data modelling 134
concurrency 403
Concurrency within objects: layered

Index

approach 403
constraints 143
Contribution to further development of JSD 321
control 93
Controlling programmes through measurement 93
Converting prototypes to operational systems: evidence from preliminary industrial survey 351
cost estimation 224, 232
cost-estimation models 232
cost factors 224
cost modelling 594
Cost modelling of fault-tolerant software 594
cost models 224

data abstraction 281
data access 335
data collection 93
data dictionary 343
data interchange 647
data management 22
data manipulation 4
data modelling 134, 357, 451
data models 451, 741
database design 335, 758
database management 741
database management systems 22, 538, 758
database models 13
database retrieval 157
databases 4, 13, 22, 31, 38, 106, 113, 134, 157, 343, 499, 734, 741, 758
deadlock detection 483
decision-support systems 509
Defining and implementing Fortran generic abstract data types 281
design methodology 306
design process 306, 509
design rationale 306
design tool 707
Design transformation and abstract design prototyping 727
design-related decisions 509
Development and trial of groupware for organizational design and management: distributed and cooperative KJ method support system 259
diagonal uniformity 106
dictionary token counts 622
Didon: system for specification validation 489
Distributed Ada: case study 292
Distributed algorithm for communication deadlock detection 483
distributed knot detection 483
distributed systems 259, 273, 292, 483
dynamic priority 250

Economic aspects of information and communication: some considerations 171
EDSOs, implosion and explosion: concepts to automate part of application maintenance of relational databases 343
Effective incorporation of function into logic 768
Effective investment in information infrastructures 191
effort 224
electronic banking 200
EMS: case study in methodology for designing knowledge-based systems and information systems 518
entity-relationship approach 538
environments 664
executable specifications 707
Extending entity-relationship systems to support hypotheses, constraints, versions, and documents 538
Extending semantic object model: towards more unified view of information objects 106

Factors in software quality for knowledge-based systems 527
fault-tolerant software 594
file systems 273
flexible applications 343
formal methods 518
Formalization of object-oriented database model with rules 741
Fortran 281
forward engineering 547, 664
4GLs 351
frame-based systems 357
Framework for development of conceptual data modelling techniques 134
function metrics 622
functional programming 768

geographic information systems 38
graphic modelling 151
Graphic modelling technique for software execution time estimation 151
graphical specification 413
graphical user interfaces 559
graphics editor 265
Graphics Kernel System 265
groupware 259

HCI 559
High-level, three-pronged methodology for N-CHIME interface system software 306
Historical database views 113
historical databases 113
human factors 637, 641
human—computer interaction 306, 366, 559
Humanization of the software factory 641
HyperCard 259

idea processor 259
Impacts of information systems: four perspectives 181
Improving object-oriented user interfaces with constraints 143
In praise of architects 566
information 171
information architecture 191
information economics 171, 181
information engineering 720
information hiding 281
information infrastructure 191
information management 106, 581
information modelling 581
information systems 181, 205, 212, 425, 499, 656, 720
information systems engineering 499
information technology 181, 191, 200
integrated project support environments 581
integrative approaches 656
Integrative approaches to building information systems for software engineering environments 656
intelligent help systems 121
interaction technique library 265
interactionist approach 181
interactive modelling environment 306
interface design 366
interface evaluation 366
interface software 306
interfaces 734
inter-organizational systems 205
IT infrastructure 191

Jackson system development 386, 466, 509
JSD 321, 386, 466, 509

KJ method 259
knowledge bases 499
knowledge representation 741
knowledge systems 499
knowledge-based software tools 509
knowledge-based systems 518, 527

linear programming 53
local area network 259
logic programming 741, 768

management models 191, 200
MASCOT 707
measurement 171
meta-data 343
Method to estimate parameter values in software prediction models 239
methodologies 413, 499, 518, 527, 664
Methodology integration: evolution of information engineering 720
methods 386, 509, 629
metrics 224
Model of software effort and productivity 224
modelling 466
Modelling of I-CASE Platform 547

normal forms 451
Normal forms and normalization: practical designer's view 451
normalization 451

object databases 13, 106
object-based systems 403
object-oriented 4, 22, 31, 38, 143, 250, 357, 433, 466
Object-oriented approach for transputer-based data system 31
Object-oriented data management in specialized environments 22
object-oriented databases 4, 13, 22, 31, 38, 357, 741
Object-oriented databases and frame-based systems: comparison 357
object-oriented design 265
object-oriented development 224
object-oriented systems 403, 433
Object-oriented systems development: survey of structured methods 433
online help 121
Operating system analysis tools 340
operating systems 121, 340
organizational impacts 181

parallelism 31, 403
parser generator 281
performance analysis 151
Perspective on object databases 13
Petri nets 273
preprocessor 281
priority scheduling 250
process maturity 611
Process maturity as framework for CASE tool selection 611
process models 86
production rule set 250
production rules 741
productivity 224, 616
program analysers 65
program analysis 340, 675
program design 466
programming 281
programming languages 281, 768
